Home Healthcare Laboratory of America (HHLA) is the leading provider of customized clinical lab services to the home healthcare industry. Our unique process and services make us the preferred laboratory given the special challenges of delivering care in the home setting. One of the greatest demands on the homecare nurse is getting specimens from the home to a laboratory without time, temperature and agitation affecting the integrity of the specimen.

After years of research, HHLA has developed a system that stabilizes specimens at the time of collection and eliminates the need for blood to be immediately centrifuged. Most laboratories test on serum, which requires that the blood be spun after the blood clots. If the blood is not spun the red cells begin to breakdown or metabolize analytes, compromising the accuracy of results.

"HHLA is the leading provider of customized clinical lab services to the home healthcare industry."

Home Healthcare Laboratory of America, Inc. (HHLA) provides an individual secured website for all of our customers and adheres to HIPAA requirements for patient confidentiality
